

Benefits using Bee-Patch®

9. March 2011

- ✘ The patch is for treatment of stings from bees and wasps.
- ✘ The patch is different from other adhesive bandages.
It is yellow with two black lines across - like the wasp.
- ✘ The patch contains a patented sugar membrane which works just like a sugar cube.
- ✘ The poison is extracted from the skin through the puncture from the stinger by osmosis and transported up into the patch.
- ✘ Treatment period: 1 hour.
- ✘ The patch **does not** contain any kind of medicine.
- ✘ The patch contains ~250 mg sugar (sucrose).
- ✘ The sugar does not cross the skin barrier and can be used by diabetics as well.
- ✘ The patch is packed as a single unit for single use.
- ✘ The patch is sterile.
- ✘ The patch **has not** resulted in any form of skin irritation or allergic reactions and is still under pharmaceutical control.
- ✘ The patch is CE registered by the Danish authorities.
- ✘ The patch is developed in Denmark.
- ✘ The patch was launched in Denmark 2009 and more than 135.000 pcs. has been sold until now.
- ✘ During the festival on Langeland (Langelandsfestivalen, August 2009), 29 persons were treated with Bee-Patch after sting from wasps. 27 persons were very satisfied and had no swelling and pain 1 hour after treatment.
- ✘ The patch is used by the Danish beach life guards on Sjaelland and Jutland during summer (2009 and 2010).
- ✘ Are you **allergic** to bite or stings from insects, **always** follow the descriptions from your Doctor.
- ✘ In 2011 Bee-Patch will be launched in 10 countries in Europe.
- ✘ If you have additional questions please contact: info@bee-patch.com
