

Frequently Asked Questions

What is NitroMax™ soil amendment?

NitroMax™ soil amendment is a unique non-toxic, non-petroleum based liquid concentrate designed to increase the natural nitrogen cycle in the soil, stimulate plant growth, and reduce fertilizer input costs. NitroMax™ is easy to apply and economical to use. It can be used as a seed, soil, plant, tuber or bulb treatment and may be applied through irrigation systems, ground sprayers, hand sprayers or aurally; using water as the carrier.

What does NitroMax™ do?

NitroMax™ is a biological soil inoculant that introduces and stimulates microbial activity in the soil and includes an array of micro-nutrients and trace minerals. It is a culture suspended in an aqueous solution that acts as a biocatalyst to microorganisms in the soil when applied with water as a carrier.

What makes NitroMax™ work?

NitroMax™ plays an important role in amending the soil to provide the environment needed to support microbial activity. As the soil microbes become more active the plants are able to efficiently use the residual and applied nitrogen and other fertilizers in the soil. NitroMax™ makes more efficient use of residual and applied nitrogen, and Increases nitrogen nodulation on legume crops. NitroMax™ helps make your soil come alive!

If a customer is interested in AgraCo's line of NitroMax™ products, but not sure if they will work for his operation, what is the best way to approach this situation?

We know that our products work. Contact one of our sales personnel, or call our office today. We will be happy to evaluate your situation and give you our best advice as to whether NitroMax™ will work for you.
