the Floral  
Department

### **How Produce Saver Works**

New from AgraCo Technologies International, Produce Saver sachets. Produce Saver drastically reduces spoilage and aging by absorbing harmful ethylene gas given off by most fruits, resulting in up to four (4) weeks shelf life. Just place the Produce Saver sachet in your refrigerated crisper bin and see how much longer your fresh fruits and vegetables will last. Produce Saver also eliminates odors in refrigerator, freezer and kitchen.

### **Why Produce and Flowers Spoil**

Natural gases (ethylene) produced by fruits, cut flowers and foliage plants accelerate spoilage, aging, and decay, as confirmed by the U.S. Department of Agriculture and the Society of American Florists. Our Produce & Floral Saver sachets will increase the life of your cut flowers and help prevent further ethylene contamination.
