- ⇒ Clean Sprayer
- ⇒ Apply spray solution within 8 hours of mixing to insure effectiveness of Nitro/Max
- ⇒ Water should be warm
- ⇒ If Water is chlorinated, fill tanks and let sit overnight before adding Nitro/Max

Don't treat your soil like dirt

The AgraCo Soil System

ROW CROP PROGRAM INCLUDING VEGETABLES

The following is representative of a typical AgraCo Program.

Results from soil testing allow the program to be tailored to specific vegetable growing situations.

Soil Test 1 Begin with soil test results. Send AgraCo a soil sample* the test results from your local laboratory.

Analysis AgraCo staff will analyze your soil requires

**1st Application-
Soil** Apply NITRO/MAX at the rate of one US gallon per 10 acres; J&J SOIL CONDITIONER at 8 oz. per acre and one US gallon NI/CAL per acre. Apply in the Fall after harvesting.

2nd Application Apply NITRO/MAX, J&J SOIL CONDITIONER, NI/CAL at the above rates plus one gallon FISH/AGRA per acre. Apply after emergence or before flowering.

Row Crop Program Continued

Foliar Application (Optional)

A 1/2 rate application of NITRO/MAX and J&J SOIL CONDITIONER just before flowering will maximize yield.

SOIL TEST 2

After harvest take a second soil sample and send for testing.

BALANCING ANALYSIS

AgraCo will analyze and compare the second sample and make further recommendations. This will make it possible to maximize soil balance and productivity.

NOTES:

1. The above program will reduce NPK requirements by 30% to 50% while maintaining current yield levels.
2. Soil test must be complete, I.E. including levels of micronutrients and minerals..
3. Synthetic chemical fertilizers are compatible with AgraCo products. The products are effective, however, when organic matter is above 2%. For quickest results incorporate organic material or manure (where available) with the Fall application.
4. AgraCo FishAgra provided an effective source of nutrients whether applied with manure or synthetic fertilizers. The standard rate of application is 1 gallon per acre, although some users find a 2 gallon rate with less synthetic fertilizers produce higher yields of profit.
5. On soils with exceptionally low organic matter, or where fertilized over several growing seasons with an exclusively synthetic fertilizer program, transition to balanced soil using the AgraCo program can take 2 to 4 years. The AgraCo team will work with growers to make the change as efficient as possible.
