

Extend- A -Life™ Model 341 Electric Blower Unit Commercial Specifications & Usage Chart

USAGE RECOMMENDATIONS

For refrigerated warehouse operations. Each unit is designed to absorb ethylene gas in areas up to 45,000 cubic ft of space.

For larger warehouses you may need multiple electric blower units. (Requires 4 model 341 filters per unit.)

SPECIFICATIONS

Requires installation by a qualified electrician.
110 VAC two-speed electric blower fan.

ADDITIONAL RECOMMENDATIONS

AgraCo Representatives are available to assist you in customizing your Ethylene Removal System to fit your needs. AgraCo Representatives can offer recommendations on the placement and layout of produce within the storage space. The layout of the fruits and vegetables with regard to how the inventory is stored is as important as the placement of ethylene filters to absorb ethylene gas.

What makes AgraCo Filters and Sachets Superior to the Competition?

- Highest Level of Active Ingredients (8% Potassium Permanganate)
- Manufactured according to Military Specifications ("Mil. Spec.")
- Filters Encased in Metal Mesh – Not cloth or Paper (Other filters can tear resulting in Food Contamination or Purple Color Staining of Products.)
- Sachets constructed of Tyvek™ - will not tear, rot, or support mold or mildew
